Hi David,

I would like to request the following search. I need seq id 2 in the protein databases (commercial and interference)

Thank you,

---

Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches. Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnppn  
Searches run against the Amino Acid Pending database produce two sets of results, with the extensions .rapm and .rapnp

***Because they contain data that is confidential, the results of Pending database searches should not be left in the case .***
